

Flexotrap and Continest join forces for modular shooting ranges

Flexotrap AB and Continest Technologies Plc. have entered into a strategic cooperation combining Flexotrap's proprietary bullet trap technology with Continest's manufacturing and deployable infrastructure expertise. Their first joint delivery will equip a modular indoor shooting range for a Continest defence customer in a Nordic NATO country.

Flexotrap will supply four fully assembled CS Tactical ballistic modules to Continest's manufacturing facility in Hungary, together with technical documentation and integration support. Continest is responsible for the container solution and final system integration.

"This is an important delivery for us as it demonstrates how our technology can be integrated as part of a complete modular indoor shooting range. Armed forces need to be able to establish and adapt training capacity faster than before, and container-based solutions provide a practical way of creating that flexibility. Continest has strong expertise in deployable infrastructure solutions, and we see good potential for further joint projects going forward," says Elias Mibesjö, CEO of Flexotrap.

The cooperation also provides a framework for Continest to manufacture Flexotrap products on Flexotrap's behalf under assignments authorised in writing by Flexotrap, following its technical specifications and quality requirements. Flexotrap retains ownership of its technology and know-how. Together, the companies aim to combine efficient production with reliable, high-quality training solutions.

"We selected Flexotrap because its proven ballistic technology is a strong fit with Continest's expertise in modular, rapidly deployable infrastructure. By combining these capabilities, we can create mobile shooting range solutions that are not only robust and safe, but also flexible and adaptable to the changing training needs of defence forces. We see this first joint project as the beginning of a longer-term cooperation, with significant potential to further develop our mobile shooting range solutions for international defence customers," says Vidor Kis-Márton, CEO of Continest.

Delivery will take place during autumn 2026 and the project marks the first joint delivery and provides a foundation for further collaboration.

About Flexotrap

Flexotrap develops and supplies modular bullet trap systems for permanent, temporary and relocatable shooting ranges, both indoors and outdoors. The systems enable the centralised collection of projectiles and ballistic residues without the use of rubber granulate. Flexotrap's solutions are used by defence, law enforcement and security organisations in Sweden and international markets.

Flexotrap is a member of the Swedish Security & Defence Industry Association (SOFF) and is registered in the supplier database of the NATO Support and Procurement Agency (NSPA).

About Continest

Continest Technologies Plc. is a Hungarian technology company developing and manufacturing innovative foldable infrastructure solutions. Its patented technology enables efficient transportation and rapid deployment. Continest units are used in nearly 30 countries across defence, humanitarian, event and commercial applications.
